

Decentlab GmbH and TerraData srl Collaboration Announcement

On February 1st 2014, Decentlab and TerraData have started a new collaboration. Under the agreement TerraData will become a distributor of and representative for Decentlab technology within Italy.

The agreement will enable TerraData to expand their extensive service offering in environmental monitoring, to include the latest in-situ measurement technology.

Reinhard Bischoff, Decentlab's managing director states "We are delighted to have TerraData as a partner as we both share a passion for accurate data acquisition and both have a service oriented scientific approach. Our high quality, easy-to-deploy technology will complement their extensive expertise in environmental monitoring and advance monitoring field sites within Italy."

Dr Giorgio Brunialti, TerraData's Marketing Director, said "TerraData environmetrics concern is to provide representative, transparent and defensible environmental data and analyses. Decentlab's wireless sensor networks will provide near real-time data access via the internet to high quality data and support our customer's projects."

As part of this new collaboration, both companies agree to look for new opportunities to utilise the complementary expertise of both Decentlab and TerraData.

About Decentlab

Decentlab is a Swiss based company, a spin off from the Swiss Federal Laboratories for Materials Science and Technology (Empa). Our mission is to provide real-time monitoring solutions; making them easier to deploy over many locations, ensuring data quality and supporting collaboration. We provide devices that have been engineered to support a wide range of sensors to be used in measurement applications and monitoring systems for controlled experiments and real-time monitoring. We have world-wide deployments including Sweden, Australia, Japan, New Zealand, Belgium, Italy and Switzerland.

About TerraData environmetrics

TerraData environmetrics is a spin-off company of the University of Siena (Italy). Our mission is to foster a science-based, quality-assured knowledge on natural resources to envision proper conservation and management actions. We develop, integrate, transfer and apply the results of scientific research, in order to promote quantitative methods for environmental monitoring and assessment.
